Address: Panauti-10, Kavrepalanchowk

Professional Summary

I am a detail-oriented Frontend Engineer specializing in building scalable geospatial systems and data-driven applications. My core expertise lies in React, TypeScript, and Tailwind CSS, with a proven track record of delivering high-performance UIs for complex platforms. I am highly motivated by fast-paced environments and have a strong drive to excel in backend development to become a more versatile engineer.

Technical Skills

- **Core:** React.js, TypeScript, JavaScript.
- **Styling & UI:** Tailwind CSS, shadcn/ui, SCSS, Responsive Design.
- **Tools:** Vite, TanStack Query, Recharts, Git.
- **GIS & Mapping:** MapLibre GL, Mapbox GL JS, OpenLayers, Leaflet.
- **Backend & Integration:** Node.js, Express, RESTful APIs, Stripe API, MongoDB.

Professional Experience

Frontend Developer NAXA Pvt. Ltd. – Omkareshwor Mandir Road, Kathmandu

October 2023 – Present

- Developed and maintained interactive geospatial web applications using React and modern frontend technologies.
- Collaborated with GIS specialists to integrate advanced mapping libraries including MapLibre, Openlayers, and Mapbox.
- Built reusable UI components ensuring high responsiveness, accessibility, and optimized performance.
- Worked closely with backend teams to consume complex REST APIs and deliver real-time data visualizations.
- Contributed to the design and development of spatial dashboards for infrastructure and planning projects.

MERN Developer Graphene Incorporation – Tripureshwor, Kathmandu

November 2020 – July 2022

- Built responsive, cross-browser websites ensuring compatibility across Edge, Chrome, and Firefox.
- Designed and developed REST APIs for seamless third-party integrations.
- Optimized frontend logic and database queries for scalable system performance.
- Independently managed small-scale projects while contributing to large-scale enterprise solutions.

Major Projects & Achievements

1 . Stozy – Community-Based Peer-to-Peer Storage Marketplace

- Developed a robust backend architecture for a "sharing economy" platform connecting users with unused local storage spaces.
- Engineered secure payment workflows by integrating **Stripe API** to handle automated rental fees, host payouts, and subscription management.
- Designed and optimized a flexible **MongoDB** schema to manage diverse storage types (from closets to parking spots) and coordinate rental schedules between hosts and renters.
- Built scalable RESTful APIs using **Node.js** and **Express** to facilitate real-time space availability, user authentication, and secure communication.
- **Tech Stack:** Node.js, Express, MongoDB, Stripe API, JWT for Authentication.

2. Victory Project – Municipal Water & Rainfall Monitoring

- Designed dynamic forms and UI layouts for municipal analytics and data collection.
- Built real-time GIS visualization Charts and Map Component for monitoring rainfall and water levels.
- Used **OpenLayers** for its powerful layer-based GIS architecture, real-time vector data handling, custom styling, and precise map interactions; built with **React**.

3. National Statistics Office (NSO) – Data Entry & Reporting Portal

- Designed and implemented an interactive statistical dashboard and data visualization tools to provide real-time snapshots.
- Engineered modular UI components with integrated automated data validation tools, ensuring data accuracy at the point of entry and facilitating role-based access for various administrative levels.
- Used **Recharts** for responsive and interactive chart visualizations, **shadcn/ui** for accessible and consistent UI components, and **TanStack** Query for efficient server-state management, caching, and real-time data synchronization. Built with React, Typescript using Tailwind CSS.

4. PIN & UNOPS – Nepal Police

- Developed an incident analytics interface for visualizing crime patterns and security insights.
- Implemented interactive heatmaps and dynamic GIS filters for spatial analysis.
- Engineered responsive map interfaces featuring custom icons, thematic layers, and interactive popups, ensuring seamless user experiences.

- Used **MapLibre GL** for high-performance vector maps with 3D terrain thematic layers, custom icons, and interactive popups; **Recharts** for analytical chart visualizations; built with **Vite + React (TSX)** and **shadcn/ui** for a fast, modern, and accessible UI.

5. Geo-Hazard Module – Bipad Portal (NDRRMA)

- Built interactive map layers for flood, landslide, and hazard impact analysis.
- Integrated geospatial computations to visualize damage estimations on a web-based platform.
- Used **Mapbox GL JS** for high-performance interactive maps and layered hazard visualization; built with **React (TSX)** and **SCSS** to deliver a scalable, responsive, and maintainable frontend.

Education *

- **B.Sc. (Hons) Computing**

  The British College, Thapathali, Kathmandu | 2017 – 2022 (First Class Honours)

- **+2 Science**

Milestone International College, Lalitpur | 2013 – 2015 (58%)

- **SLC**

Samudayik English Secondary Boarding School, Panauti | 2012 (78%)

Certifications & Training *

MERN Stack Training – Broadway Infosys

Languages *

- **Nepali:** Native
- **English:** Fluent
- **Hindi:** Conversational
